ANNUAL REPORT ON VITAL STATISTICS, 1922.

INTRODUCTORY.

COMPILATION OF VITAL STATISTICS.

In New Zealand births and deaths are registered in duplicate, one entry being made in the register of the Local Registrar and the other on a loose sheet, the latter being transmitted quarterly to the Registrar-General at Wellington, who keeps the Dominion Register. For the compilation of statistics the essential particulars are transferred to a card by the Registrars in the urban areas, and in other cases by officers of the Census and Statistics Office who visit the Registrar-General's Office quarterly for this purpose. The statistics are compiled annually in the Census and Statistics Office, monthly statements for the urban areas also being compiled from the information on the statistical cards furnished at the end of each month by the Registrars concerned.

In the case of marriages, a copy of each entry in the register of the officiating minister or Registrar is sent quarterly to Wellington, where statistical cards are written for all marriages, and annual statistical tables compiled.

The hospital statistics are compiled in the Census and Statistics Office from returns supplied quarterly by Medical Superintendents of public hospitals throughout the Dominion. An individual card is supplied for each patient discharged or dying during the quarter, and a summary showing numbers and sexes of admissions, discharges, and deaths, and patients remaining at the end of the quarter is also furnished.

For the compilation of the statistics of benevolent and orphan asylums a return is obtained annually from each institution, giving a summary of admissions, discharges, &c., and the ages and sexes of all inmates who were in the institution at any time during the year.

The figures of births, deaths, and marriages quoted in these introductory notes or contained in the tables are in all cases exclusive of Maoris. The hospital and benevolent and orphan asylum statistics, however, cover Maoris also.

BIRTHS.

Number and Rate.

During the year 1922 the births of 29,006 children born alive were registered, representing a rate of 23·17 per 1,000 of mean population. This number is 439 more than that for the previous year, and is the second highest ever recorded in the Dominion, having been exceeded only in 1920, when 29,921 births were registered. The rate, however, is exceedingly low—lower, indeed, than in any previous year with the solitary exception of 1919, the rate for which was, of course, very seriously affected by the absence of men at the war, as well as to a certain extent by the disastrous influenza epidemic of 1918–19.

Sexes of Children born.

Of the infants whose births were registered in 1922 14,897 were males and 14,109 females, the number of males per 1,000 females being 1,056, as compared with 1,042 for 1921, and approximating closely the average of 1,054 for the preceding ten years. The proportions for the various provincial districts in 1922 ranged from 963 males per 1,000 females in the case of Canterbury to 1,117 per 1,000 in Otago.

In the case of first-born legitimate children whose births were registered during the year the number of male births per 1,000 females was 1,068, as against 1,076 in the previous year, and is slightly higher than for the average of all births. Among illegitimate children, however (nearly all of whom would be first-born infants), the proportion was 1,086 males per 1,000 females, which is in direct contrast with the experience of the previous year, when the proportion was 1,036, and considerably lower than that for first-born legitimate children in that year.

Multiple Births.

Counting only cases where both children were born alive, there were 328 cases of twin births (656 children) in 1922.

The total number of children born alive was 29,006, and the number of mothers of living children was 28,678. Thus one mother in every 87 gave birth to twins, as compared with 80 in 1921, 81 in 1920, and 89 in 1919.

In 114 cases of plural births in 1922 both children were males and in 90 both females, the children being of opposite sex in the remaining 124 cases.

Illegitimate Births.

The births of 1,224 children (638 males and 586 females) registered in 1922 were illegitimate, 42 in every 1,000 children registered being thus born out of wedlock, a proportion slightly lower than in 1921 (44), and considerably lower than in 1920 (48). The total mentioned includes 106 children whose births had not previously been registered as illegitimate, but who were legitimated under the authority of the Legitimation Act. One hundred and ninety-three births previously registered as illegitimate and re-registered under the Legitimation Act are not included.

Still-births.

Still-births registered in 1922 totalled 842, the sex being male in 469 cases, female in 364, and not stated in 9. The total includes 42 illegitimate cases. In 10 cases both of twins were still-born, in 2 cases all of triplets, and in 1 case one of triplets, while in 30 other cases where plural births would normally have been recorded one child was born alive and the other still-born.

Adoptions.

During the year 1922 the registration of 379 adopted children (157 males and 222 females) was effected, as compared with 584 in 1921, 501 in 1920, and 266 in 1919.

MARRIAGES.

Number and Rate.

During the year 1922 9,556 marriages were solemnized, corresponding to a rate of 7·63 per 1,000 of mean population. The number of marriages for the year is 1,079 less than in 1921, and 2,619 less than in 1920.

Although in point of numbers the marriages solemnized in 1922 are still a long way in advance of any year prior to 1914, the rate is, on the other hand, the lowest recorded since 1899—that is, of course, excluding some of the war years, the abnormal circumstances ruling in those years affording an obvious explanation of the low rates then recorded.

The high figure for 1920 was due to the return of men from the war, coupled with the prosperity of the country. A glance at the quarterly figures for 1920, 1921, and 1922 shows that, in sympathy with economic conditions, marriages continued at a high figure until about Easter of 1921, and then fell away. The quarterly figures are as follows :—

	1920.	1921.	1922.
Quarter ended 31st March	2,981	2,872	2,249
,, 30th June	3,329	2,849	2,555
,, 30th September	2,843	2,330	2,214
,, 31st December	3,022	2,584	2,538

Statistics covering a period of years show that, except when Easter falls in March, June quarter has normally the highest number of marriages, followed by December, March, and September quarters, in that order.

Condition of Contracting Parties.

Of the total of 9,556 marriages recorded in 1922, in 8,018 cases neither party had previously been married. This represents a percentage of 84 as compared with 85 in 1920 and a corresponding percentage of 90 in 1914. Out of every 1,000 persons married in 1914, 11 were described in the register as divorced and 51 as widowed, the corresponding figures for 1922 being 28 and 69 respectively. The increase in the one case is a reflex of the large increase in divorce since the war, while as regards remarriages of widowed persons the obvious explanation lies in the war and the influenza epidemic. The figures for 1922, in common with those of previous years, show that in the case of divorced persons women are more likely to remarry than men, while in the case of widowers and widows the converse holds. This is interesting in view of the fact that the figures for England and Wales for 1921 and previous years show just the opposite tendency.

Included among the widows in 1922 were 9 women, and among the widowers 5 men, who remarried under the protection of the provisions of section 224, subsection (5), of the Crimes Act, which reads : "No one commits bigamy by going through a form of marriage if he or she has been continually absent from his wife or her husband for seven years then last past, and is not proved to have known that his wife or her husband was alive at any time during those seven years."

Ages of Persons married.

Of the persons married in 1922 292 bridegrooms (or 3 per cent. of all grooms) and 1,528 brides (16 per cent.) were under 21 years of age. Of the bridegrooms one was between 15 and 16, 7 were between 17 and 18, and 37 between 18 and 19, while of the brides one had not attained her fifteenth birthday, 14 were between 15 and 16, and 42 between 16 and 17 years of age.

At the other end of the list 693 bridegrooms and 324 brides were over 45 years of age, these figures representing 7 per cent. and 3 per cent. respectively of the totals. Sixty per cent. of the bridegrooms and 77 per cent. of the brides were under 30 years of age.

Dealing with individual ages it is found that age 24 held pride of place with bridegrooms and age 21 with brides. The latter has remained unaltered for many years, but in the case of bridegrooms what may be termed the most popular age has varied considerably during recent years. For several years prior to 1918 it was 26, but in that year age 28 was to the fore, followed by a return to 26 and 27 (equal) in 1919. In 1920 it fell to 25, and in 1921 and 1922 to 24, a state of affairs which had not previously occurred since statistics of individual ages of bridegrooms and brides were instituted in 1902.

The average age at marriage in 1922 was 30·61 for bridegrooms and 26·86 for brides, the median age being—grooms 28, brides 24.

Marriages by Ministers of various Denominations.

Of the 9,665 marriages registered in 1922, Church of England clergymen officiated at 2,614 (27·32 per cent.), Presbyterians at 2,466 (25·77 per cent.), Methodists at 1,034 (10·82 per cent.), and Roman Catholics at 1,151 (12·03 per cent.). The only other religious denomination whose ministers officiated at more than 100 marriages during the year was the Baptist Church (170). Ministers of the Congregational Independents solemnized 88 marriages, ministers of the Church of Christ 74, and officers of the Salvation Army 55.

Civil marriages numbered 1,815, or 18·99 per cent. of the total. The percentage of civil marriages is considerably lower than in any of the war years, higher than in late pre-war years, and compared with the figure for 1921 (17·74) shows an increase of 7 per cent.

DEATHS.

Number and Rate.

The number of deaths registered during 1922 (10,977) is the third highest ever recorded in New Zealand, having been exceeded only in 1918 (the epidemic year) and 1920. The rate, 8·77 per 1,000 of mean population, is, however, remarkably low, and is the second lowest in the history of the country, the previous lowest rate being that for 1921 (8·73). The numbers of deaths in each quarter of the last two years are as follows :—

	1921.	1922.
Quarter ended 31st March	2,480	2,398
,, 30th June	2,528	2,686
,, 30th September	3,094	3,278
,, 31st December	2,580	2,615
Totals	10,682	10,977

The increase in 1922 is common to all quarters with the exception of the first. The third quarter of the year almost invariably ranks highest in point of number, on account of the toll that the winter months take of people in advanced ages.

Sexes of Persons dying.

Not only does the male population of the Dominion exceed the female, but the death-rate of males is normally higher than that of females. Hence the number of deaths of males is considerably in excess of those of females. In 1922 deaths of males numbered 6,131 (which is 32 more than in the previous year), as against only 4,846 in the case of females, a figure which shows a much higher increase in number over 1921 when the total deaths of females were only 4,583. The male rate in 1922 was 9·65 per 1,000 and the female 7·90.

For every 100 deaths of females registered during the year there were 127 of males, and the death-rate of males was 22 per cent. higher than that of females.

Ages at Death.

Deaths during 1922 at each year of age are shown in the table on page 18, and for convenience are here given in quinquennial age-groups, the two sexes being shown separately.

Age-group.	Males.	Females.	Total.	Age-group.	Males.	Females.	Total.
Under 5	923	672	1,595	60 and under 65 ..	405	325	730
5 and under 10 ..	135	104	239	65 ,, 70 .	519	354	873
10 ,, 15 ..	85	87	172	70 ,, 75 .	505	400	905
15 ,, 20 ..	114	113	227	75 ,, 80 ..	518	426	944
20 ,, 25 ..	153	134	287	80 ,, 85 .	529	390	919
25 ,, 30 ..	149	164	313	85 ,, 90 .	313	246	559
30 ,, 35 ..	198	179	377	90 ,, 95 .	68	52	120
35 ,, 40 ..	242	212	454	95 ,, 100	22	13	35
40 ,, 45 ..	283	226	509	100 and over ..	3	4	7
45 ,, 50 ..	295	232	527				
50 ,, 55 .	348	252	600	Totals .	6,131	4,846	10,977
55 ,, 60 .	324	261	585				

A preponderance of males occurs at all age-groups with three exceptions, the most important of which is the group " 25 and under 30," a period at which the effects of child-bearing are felt in the female numbers. The two preceding groups show a very slight excess of males, the greatest excess occurring at ages 60 and over, in sympathy with the greater disparity between the numbers of male and female population at those ages.

The tables on pages 19 and 20 are very interesting, and are worthy of close inspection. Both give practically identical results, and attention may be confined to the first, which shows the number of deaths of males at the various age-groups in each year from 1872 to date. The total male deaths in 1922 were three and one-third times greater than in 1872, but the deaths under one year of age increased by less than one-eighth in the fifty years; indeed, taking the years 1874 onwards and comparing them with the last six years a considerable decrease is recorded. During the period the annual number of births doubled itself, and the decrease in the deaths under one year is an eloquent tribute to the efficacy of the steps taken to preserve infant-life.

Turning now to the age-group "80 years and over" at the other side of the table, a remarkable difference between the earlier and later years covered by the figures is apparent. In 1872 deaths of males at ages 80 and over numbered only 17, or less than 1 per cent. of the total of 1,844, while in 1922 935 male deaths over 80 years of age were recorded, this number representing 15 per cent. of the total male deaths in that year. In 1900 the corresponding percentage was slightly under 6. The figures are a reflex of the changes in the age-constitution of the population, combined with the great improvement in the death-rate at the earlier ages.

Similar though less pronounced changes have occurred in the age-groups between 60 and 80 years, while the groups up to age 40 show results opposite to these.

Returning now to the figures for 1922, it is found that the median age at death was 55 in the case of both males and females. The average ages at death for the two sexes were 50·16 years and 49·69 years respectively. As regards individual ages after the first year, age 78 was the highest in point of numbers for males, age 77 for females, and age 78 for the two sexes taken in conjunction.

Infantile Mortality.

In the year 1922 the number of deaths under one year of age was 1,215, and shows a considerable drop when compared with the 1,366 deaths in 1921. The infantile-mortality rate was 4·19 per 100 live births, and is by far the lowest rate as yet recorded, 4·53 in 1919 and 4·78 in 1921 being the lowest for any previous years.

The rate is invariably higher for male infants than for females, the figures for 1922 being 4·82 and 3·52 respectively. There is an even greater disparity in the actual numbers for the two sexes (718 males, 497 females), owing to the greater number of male children born.

Sixty-five per cent. of the infantile deaths in 1922 occurred within the first month of life. The figures for four divisions of the year are as follows:—

Age.	Numbers.			Rate per 1,000 Births.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
Under 1 month	470	320	790	31·55	22·68	27·24
1 month and under 3 months ..	112	66	178	7·52	4·68	6·14
3 months and under 6 months ..	54	42	96	3·63	2·98	3·31
6 months and under 12 months ..	82	69	151	5·50	4·89	5·20
Totals	718	497	1,215	48·20	35·23	41·89

The great improvement which has taken place in the infantile-death rate is all the more remarkable when it is considered that the position as regards the first month of life has remained much the same since the "seventies," although the rate for 1922 for the first month of life (27·24 per 1,000 births) is slightly lower than the corresponding figure for the period 1881-85 (29·77). The rate of deaths among infants who survive the first month has, on the other hand, fallen from 62·70 per 1,000 in 1881-85 to only 12·05 per 1,000 in 1922. Most of the deaths during the first month are due to pre-natal factors.

Analysing the first month into shorter periods, it is found that of the total of 790 deaths no fewer than 254 occurred within the first twenty-four hours, a further 113 on the second day, and 225 more within the next five days, making 592 (or 75 per cent. of the total) for the first week of life.

The most frequent cause of death among infants is premature birth, 423 deaths being attributed to this cause in 1922. Other principal causes are congenital debility (165), congenital malformations (136), and the class "other causes peculiar to early infancy" (128), which covers injuries at birth. Of post-natal diseases bronchitis, broncho-pneumonia, and pneumonia caused 100 deaths in 1922, and diarrhœa and enteritis 79.

Of the 1,215 infants who died in 1922 before completion of the first year of life, 86, or 7·08 per cent., were illegitimate. This percentage is over one and a half times that of illegitimate births to total births (4·22).

Causes of Death.

Full details of causes of death during the year 1922 are contained in the tables on pages 22 to 52. For purposes of comparison a summary of numbers and rates for the principal causes during the last five years is here given :—

Cause.	Number of Deaths.					Proportion per 10,000 of Mean Population.				
	1918.	1919.	1920.	1921.	1922.	1918.	1919.	1920.	1921.	1922.

A comparison of the figures for 1922 with those for 1921 shows that the deaths have not been spread altogether uniformly over the various diseases in the two years. Noteworthy decreases are recorded in the cases of nephritis, 67; measles, 46; whooping-cough, 45; influenza, 39; diarrhœa and enteritis, 34; and congenital debility, 26. On the other hand, the following causes show considerable increases in 1922 over 1921: Heart-disease, 173; senility, 100; bronchitis, 53; apoplexy, cerebral hæmorrhage, 51; typhoid fever, 43; tuberculosis, other than pulmonary, 24.

Dealing now with the 1922 figures for the principal causes of death, the following remarks may be of interest :—

Typhoid Fever.—The number of deaths from typhoid fever in 1922 was 67, as against only 24 in 1921, and is the highest number recorded since 1911. All were between the ages of 5 and 70, and, as in preceding years, the greatest number occurred in the Auckland Provincial District, which, with 45 deaths, accounted for nearly 70 per cent. of the total.

Measles.—Deaths from this cause fluctuate considerably from year to year, there being only 1 death registered during 1922, as compared with 47 in the previous year and 122 in 1920.

Scarlet Fever.—Ten deaths were assigned to this disease during the year, and in all cases were confined to children under ten years of age. Scarlet fever together with other common infectious diseases of children shows a lower death-rate in 1922.

Whooping-cough.—The total number of deaths from whooping-cough in 1922 was 4, which is the lowest number recorded since the year 1905, and in comparison with the two preceding years shows a substantial decrease.

Diphtheria.—There were 78 deaths allocated to this disease during the year 1922, 38 being of males and 40 of females. Twenty-six of the total deaths occurred in the Auckland Province, 18 in Wellington, and 17 in Canterbury. Of the 78 deaths from this cause 45 were among children under five years of age and 22 among children of five years but less than ten.

Influenza.—The year 1922 shows a further decline in the number of deaths from this cause, which has now practically reached its normal level. The mortality-rate per 10,000 of population was 0·53, as against 0·86 in 1921, 4·02 in 1920, and 3·03 in 1919, the three years immediately following the epidemic year.

Pulmonary Tuberculosis.—One of the most outstanding features of the year's deaths is a further decline in the pulmonary tuberculosis death-rate. The 1922 death-rate for this disease is the lowest ever recorded in the history of the country, and when it is considered that tuberculosis is one of the leading causes of death the tendency shown by this disease to decline is very gratifying. Of the 626 deaths 594 were due to phthisis and the remaining 32 to the acute form of the disease. Males numbered 339 and females 287.

Other Forms of Tuberculosis.—Twenty-four more deaths were classified under this head in 1922 than in 1921. Tuberculous meningitis was the cause of death in 75 cases, abdominal tuberculosis in 40, tuberculosis of the spine in 17, tuberculosis of the kidneys in 11, and disseminated tuberculosis in 10. Of those who died from tuberculous meningitis 4 were under one year of age, 23 under five years, and 25 between ages five and fifteen. Abdominal tuberculosis is the only form of tubercular disease which has a higher death-rate among females than among males.

Cancer.—In point of numbers deaths from cancer and other malignant tumours show a slight increase of 22 over the figure for 1921, but on the other hand the rate shows a very slight continuation of the fall experienced in 1920. One death in every seven of women and one death in every eight of men over the age of forty years is from cancer. Grouping together the figures for each of the seven classes into which cancer is divided on a location basis, the results are as follows :—

Location.	Males.	Females.	Total.
Buccal cavity	44	5	49
Stomach and liver	246	123	369
Peritoneum, intestine, and rectum	99	88	187
Female genital organs	..	87	87
Breast	..	74	74
Skin	21	11	32
Other or unspecified organs	152	116	268
Totals	562	504	1,066

The female death-rate in 1922 closely approximates the male; by excluding the two classes peculiar to women a pronounced male excess is apparent. This is particularly so in regard to cancer of the buccal cavity, stomach and liver, and skin.

Diabetes.—Of the 159 persons who died from this disease during the year 1922, 63 were males and 96 females. The total is equal to a mortality-rate of 1·27 per 10,000 of population, a figure considerably less than the average of the last five years (1·43).

Exopthalmic Goitre—Female deaths greatly exceed the male deaths in this cause, with totals of 25 and 4 respectively. All were between the ages of fifteen and sixty-five. Eleven of the 29 deaths were in the Canterbury Provincial District.

Anæmia, Chlorosis.—Of the 79 deaths from anæmia and chlorosis, males numbered 37 and females 42. Pernicious anæmia was by far the most important form of anæmia included under this heading, accounting for 66, or over 80 per cent. of the total deaths from this cause. Little movement is shown in the figures for this disease between one year and another.

Meningitis.—The deaths from meningitis in 1922 were 114, and were evenly distributed between the two sexes, 63 being of males and 51 of females. Ninety of the deaths were ascribed to simple meningitis and the remaining 24 to cerebro-spinal meningitis. Children under five years of age numbered 43. This disease seems to be steadily decreasing in both number and rate.

Infantile Paralysis.—This disease is included among the principal diseases owing to the large number of deaths due to it in 1916 (123). Only 9 deaths from infantile paralysis were recorded in 1922.

Apoplexy and Cerebral Hæmorrhage.—Little variation between one year and another is shown for deaths from this cause. The deaths in 1922 were almost equally divided between the two sexes (males 225, females 226), and were practically confined to persons over forty-five years of age.

Infantile Convulsions.—As regards both number and rate deaths from convulsions appear to be steadily decreasing. Of the 56 children whose deaths were registered during 1922, 21 were in the first month of life. Twenty-two of the deaths occurred in the Auckland Provincial District.

Organic Heart-disease.—The number of deaths from organic diseases of the heart in 1922 was 1,685, corresponding to a rate of 13·46 per 10,000 of population, and constituting 15 per cent. of the deaths from all causes. Deaths from this disease have now been rapidly increasing for some years past, and it must be borne in mind that the improvement shown in 1921 was not so much due to a decline in the incidence of the disease but to the more favourable conditions experienced in the later age-groups (which contribute the great majority of the deaths from this cause).

Arterio-Selerosis.—One hundred and three deaths were assigned to arterio-sclerosis in 1922. The rapid increase that was very noticeable in the five years 1909-13 has now apparently been arrested, deaths during the last decade showing very little movement.

Embolism, Thrombosis.—Of the 96 deaths from this cause during the year 1922, 54 were of females, this number not including deaths from puerperal embolism or thrombosis. Forty of

the deaths were attributed to embolism and 56 to thrombosis. An outstanding feature of this disease is that the mortality of females between the ages of fifteen and forty-five is far greater than that for males at the corresponding ages. The figures for 1922 were 18 and 3 respectively.

Bronchitis.—A slight increase was observed in both the number and rate of deaths from bronchitis during the year. Of the 341 deaths classed as due to this cause, 94 were assigned to acute bronchitis and 247 to the chronic form of the disease. Thirty-nine of the deaths from acute bronchitis were of children under five years of age.

Broncho-pneumonia.—The 177 deaths from broncho-pneumonia in 1922 represent a decrease of 17 on the previous year's figure. Children under five years of age contributed 89 of the total of 177 deaths.

Pneumonia.—In 1922 the number of deaths due to pneumonia was 407. Of these, males numbered 277 and females only 130. Fifty children under five years of age are included in the total. Except for occasional fluctuation due to exceptional climatic conditions the rate remains fairly constant.

Gastritis.—The number of deaths from this cause was again very low, 25 being the figure for 1922, as against 22 in 1921 and 49 in 1920. Seventeen of the deaths were of females.

Diarrhœa and Enteritis.—Diarrhœa and enteritis in 1922 was the cause of 187 deaths, 113 being of males and only 74 of females. Children under two years of age contributed 92 of the deaths. The marked reduction in the number of deaths that has taken place in recent years is accounted for by the decrease in the number of children dying under two years of age, and is due mainly to the greater care now taken to prevent loss of child-life.

Appendicitis.—Deaths from appendicitis show little movement in recent years. One hundred and seven deaths were registered during the year 1922, equal to a rate of 0·86 per 10,000 of population.

Hernia, Intestinal Obstruction.—Of the 102 deaths included under this heading in 1922, hernia was the cause of death in 17, intestinal obstruction in 67, intussusception in 6, and volvulus in 5. The figure for 1922 shows a slight increase over that of the previous year.

Cirrhosis of Liver.—Comparatively few deaths occur from this cause, which nevertheless ranks among the principal diseases on account of its fatal nature. The total of 37 is slightly higher than that for the preceding two years.

Peritonitis.—Twenty males as against 32 females are included in the deaths from this disease. There is very little variation in the rate between one year and another. Deaths from puerperal peritonitis are not included.

Nephritis, Bright's Disease.—The number of deaths from acute nephritis and Bright's disease during the year 1922 was 310. The successive increases that have occurred in this disease in recent years seem to have received a decided check in 1922, when the rate reached only 2·48 as compared with 3·08 in 1921 and 2·98 in 1920. Of the 310 deaths, acute nephritis was the cause in 38.

Cystitis.—There is always a great disparity between the number of deaths of the two sexes in this class of death, males in 1922 numbering 21 and females 5.

Puerperal State.—The maternal death-rate, which is usually reckoned at per 1,000 live births, shows a slight increase on that of the previous year (5·14 as against 5·08), but is considerably lower than that recorded for 1920 (6·48). The numbers for the three years were 149, 145, and 194 respectively. Puerperal sepsis is by far the most important disease coming under this heading as regards both number and fatality. Deaths from this disease increased from 48 in 1921 to 52 in 1922, eclampsia from 16 to 21, and hæmorrage from 18 to 22. Diseases to show decreases were nephritis (from 16 to 12), toxæmia (from 6 to 2), and embolism (from 15 to 9).

Malformations.—Half of the total deaths from malformations are due to malformations of the heart, or congenital heart-disease, these causing 77 deaths in 1922 out of a total of 156. Other causes showing a fair number of deaths were spina bifida, 18; pyloric stenosis, 14; hydrocephalus, 9; and cleft palate 7.

Congenital Debility.—Of the 165 deaths assigned to this cause in 1922, 42 were certified as due to inanition, marasmas was the cause in 41 cases, congenital debility in 33, and asthenia in 16. Males considerably outnumbered the females, the figures being 101 and 64 respectively.

Premature Birth.—Deaths from premature birth show no tendency to decrease. The rate in this case is best computed on the number of children born alive. On this basis the rate for 1922 (14·58 per 1,000) reveals an increase over that of last year (14·11 per 1,000), and is almost on a par with that of 1920 (14·57). Male deaths exceeded the female by 67, and the male rate was 16·45 per 1,000 births, as compared with 12·62 in the case of female infants.

Senility.—Deaths from old age are again very low, although the figure for 1922 shows an increase of 100 over 1921. Evidently the conditions so favourable to old people in 1921 were continued to a lesser degree in 1922. The figures for the two sexes (males 497, females 394) reflect the disparity in the respective numbers of males and females at the advanced ages.

Suicide.—Suicidal deaths show a further increase over the figure for 1921, a state of affairs which is perhaps due to some extent to the unsatisfactory financial conditions ruling during most of the year. The greatest number of deaths from suicide were due to hanging or strangulation (40), closely followed by firearms (38), drowning (23), and cutting or piercing instruments (22). Of the 164 deaths from suicide in 1922, 130 were of males and only 34 of females.

Other External Violence.—In addition to deaths from accidents of all kinds this heading covers homicide, the number of deaths from which is usually very small. The total for 1922 (14) is one less than for 1921. Nine of the 14 deaths were of females. Drowning is the principal cause of accidental death, being responsible for the deaths of 102 males and 20 females in 1922. Motor accidents resulted fatally to 61 persons and railway and tramway accidents to 54. Burns, scalds, and fires caused 33 deaths, falls 47, firearms 25, and injuries by animals 9. In 34 cases death was attributed to fracture of skull or other bones, without the cause of such fracture being indicated.

Orphans and Widows left.

The total number of deaths of males in 1922 was 6,131, and of these 4,874 were over twenty years of age. Included in this latter total were 3,468 married men or widowers, of whom 350 left a widow but no issue, 2,128 both widow and issue, 770 no widow but issue, and 143 neither widow nor issue. In the remaining 77 cases no information was available as to whether a widow was left or not; in 39 of these 77 cases issue was left, in 19 cases no issue, and in 19 cases no indication was given as to whether there was any issue.

The total cases where a deceased man was shown to have left a widow were 2,478, and the total issue left by all married men and widowers whose deaths were registered during the year was 13,276, representing an average of 3·83, or, if only those cases where any issue was left be taken into account, 4·52.

Of the total issue left 6,647 were males and 6,629 females. Children under fourteen years of age included in the total numbered 1,808, representing 52 for every 100 married men or widowers who died. A further 1,298 were between the ages of fourteen and twenty-one, 10,149 were over twenty-one, and the ages of 21 were not stated.

A set of tables giving detailed statistics on the subject will be found on pages 69 to 93. These tables contain much valuable data for use in connection with pension, superannuation, or insurance schemes.

CASES IN PUBLIC HOSPITALS.

Admissions and Discharges.

The total admissions to public hospitals in New Zealand during 1922 numbered 47,549. There were 3,610 patients in hospital at the beginning of the year, the total cases dealt with during the year being thus 51,159, equal to 392 per 10,000 of mean population, including Maoris. The total number of persons treated is somewhat less than the number of cases, each admission being counted a separate case.

Of the 51,159 cases, 26,983 were discharged as recovered, in 14,987 cases the patient was discharged relieved, and in 2,407 cases as unrelieved. Deaths in hospital numbered 2,984, or 5·83 per cent. of cases dealt with. There are 88 public hospitals, this number including 4 fever or infectious-diseases hospitals, 6 sanatoria for consumptives, and 3 other institutions for special classes of cases. Detailed figures for each hospital are given in the tables on pages 94 to 133, and a series of tables for all public hospital cases follows these.

The figures of admissions, discharges, and deaths for the last five years are as follows:—

Public Hospitals.—Admissions, Discharges, and Deaths, 1918–22.

Year.	Admissions.	Discharges.			Deaths.	Total Discharges and Deaths.
		Recovered.	Relieved.	Unrelieved.		
1918 ..	46,226	31,253	9,409	1,366	4,468	46,496
1919 ..	42,917	26,321	11,385	1,906	2,864	42,476
1920 ..	45,995	28,230	12,418	2,241	3,399	46,288
1921 ..	45,107	26,302	13,912	1,925	2,974	45,113
1922 ..	47,549	26,983	14,987	2,407	2,984	47,361

In general the percentage of deaths is low. Even in 1918, when the figures were adversely affected by the admission of many thousands of influenza cases to public hospitals during the epidemic of that year, deaths represented only 9·61 per cent. of all cases dealt with. In 1922 the corresponding percentage was 5·83.

Ages of Patients.

The ages of patients discharged from or dying in public hospitals during 1921 and 1922 are as shown in the following summary:—

Public Hospitals.—Ages of Patients discharged or dying.

Ages of Patients, in Years.	1921.			1922.		
	Males.	Females.	Total.	Males.	Females.	Total.
Under 5	2,411	1,776	4,187	2,444	1,804	4,248
5 and under 10 ..	2,900	2,517	5,417	2,966	2,404	5,370
10 ,, 15 ..	1,974	1,707	3,681	2,120	1,748	3,868

Unspecified	52	40	92	49	50	99
Totals ..	25,365	19,548	44,913	26,519	20,842	47,361

Diseases dealt with.

The table following shows that Class I, "General diseases," is first on the list as regards both discharges and deaths. Diseases of the digestive system and diseases of the respiratory system come second and third respectively in point of numbers, but the death-rate in each case is low. External causes come next on the list, and here again the death-rate is very low, owing to the preponderance of simple fractures, cuts, bruises, &c.

Class.	Discharges.			Deaths.		Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.	Males.	Females.	Males.	Females.
I. General diseases	4,911	2,845	773	582	409	5,314	4,206
II. Diseases of the nervous system and of the organs of special sense	1,010	1,897	535	159	128	2,322	1,407
III. Diseases of the circulatory system	624	806	84	242	116	1,200	672
IV. Diseases of the respiratory system	4,282	2,104	101	251	90	3,924	2,904
V. Diseases of the digestive system	5,918	1,833	209	181	113	4,306	3,948
VI. Diseases of the genito-urinary system and annexa	1,981	1,226	169	134	65	1,039	2,536
VII. Puerperal state	1,961	335	46	..	57	..	2,399
VIII. Diseases of the skin and of the cellular tissue	1,415	680	30	21	16	1,439	723
IX. Diseases of the organs of locomotion	902	854	72	29	16	1,302	571

XII. Old age (senile debility, &c.)	5	87	55	94	42	203	80
XIII. External causes	3,309	1,886	175	123	36	4,658	931
XIV. Ill-defined causes	293	235	109	9	2	323	325
Totals	26,983	14,987	2,407	1,861	1,123	26,519	20,842

Epidemic General Diseases.—The first class of diseases in the international classification as used up to and including 1922 is the "general diseases," the first nineteen orders of which cover epidemic diseases. The principal epidemic general diseases dealt with in public hospitals are scarlet fever and diphtheria. There are four special hospitals for the treatment of these and similar infectious diseases, all situated in the South Island. Several hospitals have fever wings attached.

A summary of the epidemic general diseases dealt with in public hospitals during 1922 is given.

Disease.	Discharges.			Deaths.		Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.	Males.	Females.	Males.	Females.
Typhoid fever	282	5	6	22	20	187	148
Malaria	3	10	1	..	..	13	1
Mediterranean fever	1	..	..	..	..	1	..
Measles	201	25	3	..	..	61	168
Scarlet fever	995	92	10	4	6	376	731
Whooping-cough	2	6	1	2	..	9	2
Diphtheria	1,245	65	3	37	27	612	705
Croup	11	..	..	..	..	7	4
Influenza	382	52	..	10	4	268	180
Dysentery	10	5	2	..	1	14	4
Erysipelas	99	32	..	3	33	61	76
Chicken-pox	31	14	1	..	1	20	27
Mumps	11	4	..	..	..	9	6
German measles	34	3	..	..	..	9	28
Rose measles	4	..	..	..	..	3	1
Rat-bite fever	1	2	..	..	..	2	1
Totals	3,312	315	27	78	62	1,652	2,142

Probably the most noticeable feature of this table is the great preponderance of females among the patients treated for measles and scarlet fever, and to a less extent diphtheria. It is of interest to note that in the case of scarlet fever and diphtheria this preponderance has existed for several years. As regards measles, however, there is generally little difference between the figures for the two sexes. Influenza almost invariably shows a pronounced male excess, as in 1922.

Tuberculosis.—Tuberculosis occupies eight orders in the classification of disease, but is usually divided into two groups—viz., pulmonary tuberculosis and other forms of tuberculosis. Pulmonary tuberculosis, with which is included tuberculosis (undefined) and acute miliary tuberculosis, comprises 65 per cent. of the total of 1,979 cases of tubercular diseases, and 73 per cent. of the deaths.

Venereal Diseases.—Patients to the number of 187 were returned as having been admitted for treatment for syphilis and 256 for gonorrhœa, males predominating in both cases. Fourteen patients died from syphilis, and seven from gonorrhœa.

With a view to obtaining some definite information regarding venereal diseases a questionnaire is attached to the hospital discharge-card, requiring completion in all cases where the condition was of syphilitic or gonococcal origin, whether the patient was actually treated for venereal disease or not. The results of this inquiry for the year 1922 are given in the table on page 164.

Cancer.—Discharges and deaths of patients treated for cancer totalled 994 (males 593, females 401), and in 294 cases, or 29·58 per cent. of the total, the disease resulted fatally.

Two special tables relating to cancer cases in public hospitals are included in the statistical tables, showing (1) ages, and (2) period in hospital, in conjunction with the location of the disease and the condition of the patient on leaving hospital. The percentage of deaths among the various classes into which cancer cases are divided on the basis of location is as follows :—

Location.	Percentage of Deaths.
Buccal cavity	13·24
Stomach and liver	45·15
Peritonæum, intestines, and rectum	45·16
Female genital organs	19·47
Breast	15·93
Skin	14·29
Other and undefined	34·40
Total	29·58

The two classes with the highest death-rates have also the highest proportion of cases where the patient was discharged unrelieved and the lowest proportion of recoveries. These two classes are composed entirely of cases of internal cancer, and the "other and undefined" class, which comes third in order of percentage of deaths, also consists mainly of internal-cancer cases.

Of the 294 patients who died in hospital from cancer during 1922, 154, or 52 per cent., had been in hospital less than one month, and of these 43 died within one week of admission.

Other General Diseases.—The principal of the remaining general diseases are as follows :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Non-puerperal septicæmia	328	187	8	13	404	132
Tetanus	11	..	..	7	15	3
Rickets	4	26	7	1	12	26
Non-malignant tumours	148	65	21	4	143	95
Acute rheumatism	317	197	8	24	315	231
Chronic rheumatism and gout	28	132	32	10	134	68
Diabetes mellitus	11	87	22	38	76	82
Exophthalmic goitre	13	51	10	8	17	65
Leucæmia	1	17	8	11	22	15
Anæmia and chlorosis	26	50	14	18	43	65
Alcoholism	155	94	4	15	240	28

Diabetes, exophthalmic goitre, leucæmia, and pernicious anæmia are usually fatal. Only three recoveries are recorded in the case of pernicious anæmia, the remaining cases mentioned being due to other forms of anæmia. Seventeen of the 18 deaths from anæmia are due to the pernicious type of the disease.

Diseases of the Nervous System.—The 1922 figures for diseases of the nervous system, following the international classification, are as follows :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Encephalitis	..	2	..	5	5	2
Encephalitis lethargica	5	9	..	11	18	7
Abscess of brain	..	..	..	6	2	4
Meningitis	20	4	2	62	57	31
Locomotor ataxia	1	16	17	5	37	2
Infantile paralysis	33	282	26	8	209	140
Other diseases of the spinal cord	2	40	41	16	59	40
Apoplexy, cerebral hæmorrhage	21	51	3	116	113	78
Softening of the brain	..	..	..	2	1	1
Paralysis without specified cause	22	57	28	22	82	47
General paralysis of the insane	4	2	6	..	10	2
Other forms of mental alienation	21	80	146	4	159	92
Epilepsy	15	109	35	3	115	47
Convulsions	17	8	..	7	6	26
Convulsions of infants	21	8	..	1	18	12
Chorea	38	25	1	1	18	47
Neuralgia, neuritis	188	251	39	3	293	188
Other nervous diseases	188	383	125	12	465	243
Totals	596	1,327	469	284	1,667	1,009

This class shows a fairly high death-rate over the whole group, the rate, however, being greatly reduced by the inclusion of such minor complaints as neuralgia and neurasthenia, which represent a fair proportion of the total cases dealt with. Among the discharges it is noticed that the number of cases returned as recovered is considerably less than those classified as relieved.

The number of infantile-paralysis cases in 1922 (349) is much higher than in 1921 (231), and the figures for both years compare very unfavourably with those of recent preceding years. Both recoveries and deaths represent very low percentages of the cases treated.

The large percentage of mental cases shown as unrelieved is due to the inclusion of a number of such cases being admitted to hospital for observation. It is not usual for mental patients to be treated in hospital for any length of time. Many mental patients are transferred from the public general hospitals to the mental hospitals.

Neurasthenia was the complaint in 487 of the 708 cases shown above for "other nervous diseases," this number including a large proportion of returned soldiers, but the total number of these cases is rapidly decreasing. Cerebral tumours accounted for 6 of the 12 deaths.

Diseases of the Eyes.—Eye troubles were responsible for admission to hospital of no fewer than 659 of the cases discharged from hospital during 1922. There were no deaths from these causes. A summary of the various diseases of the eyes dealt with is given.

Disease.	No. of Cases.	Disease.	No. of Cases.
Foreign body in eye	29	Abscess, tumour of eye	26
Strabismus	24	Dacryocystitis	18
Keratitis	27	Trachoma	5
Glaucoma	18	Blepharitis	6
Iritis	56	Other diseases (including undefined)	118
Ulcers of eye	98		
Cataract	159	Total	659
Conjunctivitis	75		

Injuries to the eyes, other than those due to the presence of some foreign body, are included in the "accident" class.

Diseases of the Ears.—Diseases of the ears dealt with in hospital in 1922 numbered 394, as compared with 313 in 1921, 255 in 1920, 208 in 1919, and 174 in 1918. Of the 394 cases in 1922, 308 were treated for otitis media, and 27 for otorrhœa. Only three deaths were recorded in 1922, all due to otitis media.

Diseases of the Circulatory System.—Organic diseases of the heart are the most important in this class. During the year 1922 the hospital returns show that there were 261 deaths due to heart-disease, as compared with 293 in 1921, 291 in 1920, 257 in 1919, and 285 in 1918. There were also 43 deaths from acute endocarditis and 54 from other diseases of the circulatory system in 1922. A table showing the condition on discharge and the number of deaths from the various diseases of the circulatory system for 1922 is given below.

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males	Females.
Pericarditis	5	10	..	1	12	4
Acute endocarditis	13	48	7	43	48	63
Organic diseases of heart	32	421	36	261	514	236
Angina pectoris	..	6	..	2	6	2
Diseases of the arteries	3	21	11	23	52	6
Embolism	2	3	3	6	9	5
Thrombosis	15	15	2	16	23	25
Varicose veins	40	21	2	..	38	25
Varicose ulcers	71	42	6	..	64	55
Varicocele	14	6	2	..	21	1
Hæmorrhoids	116	50	4	1	111	60
Phlebitis	18	12	1	..	11	20
Adenitis	87	39	3	1	83	47
Abscess of groin	60	15	..	..	58	17
Abscess of axilla	32	21	..	1	31	23
Other diseases of lymphatic system	84	34	4	..	69	53
Epistaxis	19	3	..	..	12	10
Other diseases of circulatory system	13	39	3	3	38	20
Totals	624	806	84	358	1,200	672

Diseases of the circulatory system do not occupy a very prominent position in the statistics of hospital cases. Evidently, in a high proportion of the large number of deaths registered in which heart-disease is assigned as the cause, the general state of health has not been such as to cause admission to hospital.

Bronchitis and Pneumonia.—Bronchitis, broncho-pneumonia, and pneumonia represent a big proportion of the non-tuberculous diseases of the respiratory system. The mortality-rate of

these four diseases was considerably lower in 1922 than in immediately preceding years. The figures for 1922 are,—

Disease.	Discharges.			Deaths.	Totals.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute bronchitis	131	48	2	16	109	88
Chronic bronchitis	294	266	8	56	420	204
Broncho-pneumonia	231	34	1	42	188	120
Pneumonia	885	139	4	163	824	367
Totals	1,541	487	15	277	1,541	779

Other Respiratory Diseases.—Diseases of the respiratory system, not already enumerated, include,—

Disease.	Discharges.	Deaths.	Disease.	Discharges.	Deaths.
Diseases of nasal fossæ* ..	419	1	Fibrosis of lung	13	1
Diseases of larnyx	53	2	Hydatid of lung	7	3
Goitre	134	6	Hæmoptysis	12	..
Other diseases of thyroid ..	85	5	Pleurodynia	15	..
Pleurisy	448	22	Pneumoconiosis	6	2
Pulmonary congestion ..	21	11	Other diseases	14	2
Asthma	217	6			
Pulmonary emphysema ..	9	1	Totals	1,453	62

* Other than adenoids.

Of the 140 cases of goitre discharged from or dying in hospital during the year 1922, 116 were females.

Tonsils and Adenoids.—In the classification in use up to and including 1922, adenoids rank as a disease of the respiratory system, while treatment of the tonsils is included under the digestive system. As, however, many children are admitted to hospital for the removal of tonsils and adenoids at the same time, it is well to discuss these two complaints together. In the revised classification in use from 1st January 1923, both are included among the diseases of the digestive system.

During 1922 adenoids alone was the cause shown in 217 cases, tonsils alone in 1,039 cases, while in 2,776 cases the treatment was for both tonsils and adenoids. Four deaths were recorded. The medical inspection of school-children is responsible for the admission of a large proportion of these cases to public hospitals.

Diseases of the Stomach.—There were 847 discharges and 23 deaths from diseases of the stomach during the year 1922. Of the 23 deaths, gastric ulcer was fatal in 15 cases.

The figures of discharges and deaths of the principal diseases for 1922 are,—

Disease.	Discharges.	Deaths.	Disease.	Discharges.	Deaths.
Ulcer of stomach	222	15	Hæmatemesis	15	1
Gastritis	358	2	Other diseases	96	4
Dyspepsia	134	..			
Indigestion	10	1	Totals	847	23
Vomiting	12	..			

Diseases of the œsophagus, numbering 42 cases, are not included.

Diarrhœa and Enteritis.—The total cases of diarrhœa and enteritis included in the returns for 1922 were 736, including 56 deaths. Twenty-nine of the deaths were of children under two years of age, as compared with 40 in 1921, 36 in 1920, 10 in 1919, and 19 in 1918.

Appendicitis.—Appendicitis ranks high among hospital cases, but the death-rate is exceedingly low. During 1922 only 63 deaths occurred out of a total of 2,822 cases dealt with, representing a percentage of 2·23. Of the discharges, 2,371 were returned as recoveries, 374 as relieved, and 14 as unrelieved.

Hernia, Intestinal Obstruction.—Hernia cases included in the returns for 1922 numbered 843, including 11 deaths. A table showing for the different varieties of hernia, intestinal obstructional, intussusception, and volvulus, the condition on discharge from hospital, and the number of deaths during the year 1922, is given :—

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Inguinal hernia	498	96	17	3	535	79
Ventral hernia	60	17	3	1	31	50
Umbilical hernia	20	10	..	2	8	24
Femoral hernia	26	3	1	1	13	18
Strangulated hernia	18	3	..	2	21	2
Hernia (undefined)	33	23	4	2	55	7
Intestinal obstruction	33	25	9	29	57	39
Intussusception	15	7	..	4	19	7
Volvulus	.. 3	..	..	2	4	1
Totals	706	184	34	46	743	227

Diseases of the Liver.—Non-cancerous diseases of the liver were responsible for 42 deaths during the year 1922. Discharges and deaths of patients treated for liver-diseases numbered 514. Of the total, biliary calculi was highest with 238, of whom 176 were females, and cholecystitis, with 109, next highest.

The following is a brief summary of the principal diseases :—

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute yellow atrophy	1	..	..	2	1	2
Hydatid	29	18	5	1	30	23
Cirrhosis	1	20	4	12	34	3
Biliary calculi	158	62	4	14	62	176
Cholecystitis	58	39	4	8	40	69
Jaundice	30	15	1	1	28	19
Other diseases	11	9	3	4	13	14
Totals	288	163	21	42	208	306

Diseases of the Urinary System.—Diseases of the kidneys and other portions of the urinary system numbered 1,441 ; details are given in the following table :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute nephritis	61	30	3	10	61	43
Bright's disease	36	113	10	61	128	92
Uræmia	5	6	..	22	21	12
Albuminuria	13	6	2	1	10	12
Pyelitis	138	91	7	2	47	191
Hæmaturia	13	20	3	..	28	8
Movable kidney	7	8	..	..	1	14
Pyelonephritis	2	4	..	2	4	4
Pyonephrosis	6	1	..	3	3	7
Hydronephrosis	6	3	1	1	6	5
Abscess of kidney	5	2	..	..	3	4
Other kidney-diseases	17	10	4	2	19	14

Retention of urine	26	17	1	1	40	5
Incontinence of urine	9	11	3	..	10	13
Cystitis	86	80	8	7	76	105
Cystocele	7	5	1	..	..	13
Other diseases of bladder ..	6	13	3	5	22	5
Stricture, &c., of urethra ..	45	59	4	8	93	23
Enlargement, &c., of prostate ..	68	51	10	47	176	..
Totals	604	594	68	175	835	606

Diseases of the Genital Organs.—Non-venereal diseases of the male genital organs numbered 204 during the year 1922. No deaths were recorded during the year. The figures for the principal diseases included are :—

Disease.	No. of Cases.	Disease.	No. of Cases.
Hydrocele	61	Paraphimosis	11
Orchitis	25	Undescended testicle	30
Circumcision	10	Others	38
Epididymitis	7		
Phimosis (non-congenital)	22	Total	204

Diseases of the female genital organs, other than cancer or those diseases shown to be venereal or puerperal, are an important group in hospital cases, though the death-rate is exceedingly low. The total cases passing through public hospitals in 1922 were 1,748, including only 24 deaths. The list follows.

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.
	Recovered.	Relieved.	Unrelieved.		
Uterine hæmorrhage	89	68	3	..	160
Uterine tumour	106	48	6	3	163
Metritis	22	3	..	..	25

Vaginitis	14	11	..	..	25
Bartholin's abscess	4	2	..	..	6
Other diseases	41	16	2	1	60
Totals	1,100	534	90	24	1,748

The above figures do not include 167 cases of disease of the female breast (mastitis 49, tumour 25, abscess 106, and hypertrophy 2).

Puerperal State.—A total of 2,399 cases come under the heading of puerperal. This number includes 841 cases of normal childbirth dealt with at public general hospitals, but does not cover maternity cases in St. Helens Hospitals.

There have been fairly substantial increases in the number of puerperal cases treated during recent years. This increase can justly be put down to the huge advance that has taken place in the matter of providing maternity wards at the various public hospitals. Whereas in 1918 there were only 321 cases of normal labour, this figure rapidly rose until in 1922 it reached the comparatively high figure of 841. The totals given in the following table for miscarriage do not include threatened miscarriage (30), nor do those for abortion include threatened abortion (46). These figures, together with 35 cases of hyperemesis and 28 cases of vomiting, are the principal diseases included in "other accidents of pregnancy."

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.
	Recovered.	Relieved.	Unrelieved.		
Miscarriage	285	88	1	4	378
Incomplete miscarriage	51	27	..	..	78
Abortion	115	23	..	1	139
Incomplete abortion	182	31	1	..	214
Ectopic gestation	64	15	1	..	80
Other accidents of pregnancy	142	45	20	2	209
Normal labour	817	17	7	..	841
Puerperal hæmorrhage	33	14	2	5	54
Laceration, &c., of perinæum	23	9	..	..	32
Laceration, &c., of cervix	16	5	4	..	25
Other accidents of labour	33	10	3	1	47
Puerperal septicæmia	155	30	3	38	226
Puerperal albuminuria, convulsions	30	17	1	4	52
Puerperal phlebitis and phlegmasia	11	..	..	1	12
Puerperal mania	2	4	3	1	10
Puerperal diseases of breast	2	..	..	..	2
Totals	1,961	335	46	57	2,399

Skin-diseases.—The figures for the principal diseases of the skin and annexa were as follows :—

Disease.	Number of Cases.	Disease.	Number of Cases.
Gangrene	35	Impetigo	66
Carbuncle	64	Ingrown nails	49
Furuncle	74	Herpes	31
Boils	25	Psoriasis	18
Abscess	543	Seborrhœa	14
Cellulitis	336	Urticaria	12
Whitlow	80	Ringworm	14
Ulcers	219	Pruritus	9
Eczema	147	Onychia	12
Scabies	83	Other diseases	132
Dermatitis	105		
Sinus	52	Totals	2,162
Erythema	42		

Deaths from these diseases during 1922 numbered 37, including 11 ascribed to gangrene, 19 to cellulitis, and 4 to acute abscess.

Diseases of Bones, &c.—Non-tuberculous diseases of the bones and of the organs of locomotion numbered 1,873, including 45 deaths. Twenty-eight of the deaths were due to osteomyelitis. The principal diseases in this class, following the order of the classification, were,—

Disease.	Number of Cases.	Disease.	Number of Cases.
Osteomyelitis	245	Other diseases of joints	93
Mastoiditis	168	Amputations	46
Periostitis	82	Bursitis	128
Necrosis	50	Lumbago	51
Sinusitis	119	Myalgia	72
Ethmoiditis	16	Talipes	82
Osteitis	16	Tenosynovitis	21
Exostosis	21	Ganglion	18
Abscess of bone	66	Bunion	9
Other diseases of bones	125	Other diseases of organs of locomotion	159
Synovitis	152		
Arthritis	112	Totals	1,873
Ankylosis	22		

Malformations.—The number of cases attributed to congenital malformations during the year 1922 was 503, and the number of deaths 22. Of the 481 discharges, 268 were shown as having recovered, 170 as having been relieved, and 43 as having shown no improvement.

A table is given showing the number of discharges and of deaths for each of the principal malformations.

Malformation.	Discharges.	Deaths.	Malformation.	Discharges.	Deaths.
Phimosis	327	..	Congenital dislocation of hip	14	..
Cleft palate	28	4	Talipes	33	..
Nævus	22	..	Congenital heart-disease	3	3
Hare lip	8	..	Other malformations	38	10
Hydrocephalus	4	2			
Spina bifida	1	3	Totals	481	22

Early Infancy.—Forty-seven deaths are recorded as having been due to diseases of early infancy, which is one less than in the previous year. The chief items in this class are marasmus (17 deaths) and premature birth (12 deaths). The total discharges and deaths amounted to only 126; thus the deaths amounted to the very high percentage of 37·30 to the total cases treated.

Old Age.—Hospital returns show a total of 94 male deaths and 42 female deaths from old age during 1922. These totals include the returns of three hospitals which are also old people's homes.

External Causes.—The principal headings included in this class in hospital cases are fractures and injuries in regard to which no specified cause is shown. In death-registrations the cause of death is asked for, and in cases of deaths resulting from fractures and other injuries the actual cause is obtained, and the death classified under one or other of the thirty definite headings provided. The Medical Superintendents are, however, concerned not with causes but with natures of injuries, and the returns in the great majority of cases are classed under the headings "fractures" and "injuries," which in death statistics would be regarded as somewhat indefinite, but which in morbidity statistics are invaluable on account of the fact that the part of the body affected is given in most of the cases.

Five suicidal deaths in hospital were returned in 1922, and 34 of the patients discharged were admitted for treatment for self-inflicted injuries.

Accidental poisoning, including cases not shown to be suicidal, was returned in 71 cases, including 12 of ptomaine poisoning; 252 cases of burns, 104 of accidental shooting, and 3 of injuries by crushing are also shown; 6 persons were treated for effects of heat, 2 for frostbite, 4 for exposure, 9 for suffocation, 15 for injuries inflicted by animals, 1 for an injury inflicted homicidally, and 5 for effects of immersion in water.

Fractures, Dislocations, &c.—Fracture cases dealt with during the year numbered 2,246, and miscellaneous injuries 2,831. The latter number includes 30 cases of severed tendons, 5 of strained muscles, and 10 of abrasions to skin, as well as 276 of injuries in battle, which still continue to swell the total of hospital cases.

The location of the fractures and of the miscellaneous injuries, other than those mentioned above, is shown in the following table:—

Region.	Fractures, Dislocations, &c.	Miscellaneous Injuries.
Head	117	401
Face	107	336
Neck	1	16
Back	29	103
Thorax and contents	206	59
Abdomen and contents	40	82
External genital organs	..	20
Upper limbs	635	687
Lower limbs	1,097	758
Undefined	14	48
Totals	2,246	2,510

The total deaths in hospital from "external causes" were 159 out of 5,589 cases dealt with. Fractures were responsible for 84 of the deaths, miscellaneous injuries for 27, burns and scalds for 19, and accidental posioning for 11.

BENEVOLENT AND ORPHAN ASYLUMS.

Fifty-five institutions classed under the heading of benevolent and orphan asylums furnished returns to the Census and Statistics Office for the year 1922. These institutions, which are conducted by Hospital Boards, religious bodies, and other public or semi-public organizations, are alike in that they provide free accommodation on a benevolent or charitable basis, but differ largely in the classes of persons to whom they afford assistance. The generic name covers old people's homes, maternity and refuge homes for unfortunate women and girls, orphanages, homes for the infirm or afflicted, "prison gate" homes, and an institute for the blind. Some of the orphanages deal with cases similar to those dealt with by the industrial schools under the control of the Education Department, and a few of the women's institutions receive offenders committed to them by the Court.

The 55 institutions which furnished returns for 1922 had a total of 6,908 inmates during the year, of whom 3,890 were males and 3,018 females. They commenced the year with a total of 3,608, and had 3,631 at the end of the year. Admissions during the year totalled 2,962, and in addition 338 infants were born in the institutions. Discharges numbered 2,939, and deaths of inmates 338.

The ages of all inmates in the institutions at any time during the year were as follows :—

Age-group.	Males.	Females.	Total.
Under 5	464	445	909
5 and under 10	344	422	766
10 ,, 15	359	546	905
15 ,, 25	166	469	635
25 ,, 35	185	335	520
35 ,, 45	288	136	424
45 ,, 55	259	117	376
55 ,, 65	464	104	568
65 and over	1,350	441	1,791
Unspecified	11	3	14
Totals	3,890	3,018	6,908

It is interesting to note that females exceed males in all groups between ages 5 and 35, but that males are in the ascendancy thereafter, the excess increasing for successive age-groups until for ages 55 and over three inmates in every four are males. It would appear that the orphanages cater more for girls than for boys, thus affecting the relative totals for the first three groups, though in the "under 5" group there is a slight male excess due to an excess of males among infants born in the institutions. The group 15 to 25 is composed mainly of maternity cases, and the female excess in the group 25 to 35 is largely due to the inclusion of a considerable portion of such cases. At ages 35 to 45 the figures for the Prison Gate Brigade Home at Addington are sufficient to give a substantial male excess. The inmates of this institution also go a long way towards accounting for the male excess in the next two groups, particularly group 45 to 55. Other Old People's Homes, however, also assist, more especially in the group 55 to 65, the institutions at Auckland (Costley Home), Napier (Park Island Old People's Home), Wellington (Ohiro Home), and Dunedin (Otago Benevolent Institution) between them accounting for 141 of the male excess in this group. The Old People's Homes, several of which are for men only, have a great preponderance of males among their inmates, a position partly due to the fact that at the more advanced ages males considerably outnumber females in the general population, but probably more to the propensity in many men, especially in the early days, to adopt a roving or solitary life—at sea, on the goldfields, or elsewhere—with the result that, having no friends or near relatives to turn to in their old age, they are compelled to accept the shelter and comfort afforded by an Old People's Home.

INQUIRIES.

Any communication in regard to matter contained in this Report should be addressed to the Government Statistician, Wellington, New Zealand.

Census and Statistics Office,
Wellington, 30th June, 1923.

NEW ZEALAND.—VITAL STATISTICS, 1922.

Totals	1,251,895	10,977	8·77	100·00	10·72

* The index is used for purposes of comparing the rate of mortality of one country with another. When the proportions of the living vary in regard to the different age-groups, the ordinary death-rate—which is calculated on the whole population *en bloc*—does not afford a true means of judging of the relative healthiness of the places compared. But by taking a population like that of Sweden, and applying the percentage at each age-group to the death-rates, a standard of health or index of mortality can be arrived at.

CAUSES OF DEATH, 1922.

TABLE showing, for either Sex, the Number and Percentage to the Total Deaths and the Proportion per 10,000 living of Deaths registered during the Year 1922, classified according to Causes.

Class.	Number of Deaths.			Proportion to Total Deaths.			Proportion per 10,000 living.

* These hospitals were in existence prior to 1922, but became public general hospitals on being transferred from control of the Defence Department to the Health Department. The admissions include cases in hospital at time of transfer. Trentham hospital was closed during the year, and the discharges unrelieved include a number of cases transferred to other institutions.

PUBLIC HOSPITALS, 1922.—VENEREAL DISEASE.

TABLE showing in respect of Persons discharged from or dying in Public Hospitals during 1922, the Number of Cases where the Disease was shown to be of Syphilitic or Gonococcal Origin, classified according to Sex and Condition on discharge and according to Replies to the Questions shown.
